## Office Action Summary

Application No.

09/812,438

Applicant(s)

MIYAHIRA, TOMOHIRO

Examiner

Khanh Dinh

Art Unit

2151

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 12 May 2004.  
2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.  
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-16 is/are pending in the application.  
4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.  
5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.  
6) ☒ Claim(s) 1-16 is/are rejected.  
7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.  
8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.  
10) ☒ The drawing(s) filed on 20 March 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).  
11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  
a) ☒ All b) ☐ Some \* c) ☐ None of:  
1. ☒ Certified copies of the priority documents have been received.  
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.  
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)  
2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)  
3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date 3.  
4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.  
5) ☐ Notice of Informal Patent Application (PTO-152)  
6) ☐ Other: \_\_\_\_\_.

**DETAILED ACTION**

1. Claims 1-16 are presented for examination.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-3, 5-7 and 11-16 are rejected under 35 U.S.C. 102(e) as being anticipated by Hobbs et al. (hereafter Hobbs), U.S. pat. No.5,987,454.

As to claim 1, Hobbs discloses a network system comprising:

a client (204 fig.4) for browsing web pages and a server (document server 202 fig.4) for providing a function to perform a predetermined process for said web pages (providing web requests to clients, see col.13 line 66 to col.14 line 24).

a web server (server 211 fig.4) for storing a web page (web documents) that includes a function execution request object (request headers) which is used to request that a process be performed by said function providing server, wherein said client obtains (receiving request headers) from said web server (server 211 fig.4), said web

page that includes said function execution request object (see col.14 line 25 to col.16 line 2).

when said function execution request object included in said web page is selected, said client designates the storage location (selecting a data warehouse 230 fig.4 for the requests) for a target web page and transmits a process execution request to said function providing server (see col.15 lines 3-28).

wherein, upon the receipt of said process execution request from said client, said function providing server obtains said target web page based on said storage location (data warehouse 230 fig.4) that is designated by said process execution request, performs a pertinent process for said target web page (web documents) that is obtained and returns the resultant web page to said client that issued said process execution request (sending back to clients' browsers the web documents, see fig.5, col.15 lines 29-63 and col.16 line 34 to col.17 line 32).

As to claim 2, Hobbs discloses that when issuing said process execution request (executing CGI applications), said client designates the type of process (a menu of choices to be displayed) to be performed, and said function providing server performs said designated process for an obtained web page (see col.16 lines 21-59 and col.17 lines 2-31).

As to claim 3, Hobbs discloses that when said obtained web page is linked with another web page (linking frames with the HTML documents), said function providing server also

obtains a web page at a linking destination and performs a process for said obtained web page (see fig.8, col.18 line 49 to col.19 line 53 and col.24 lines 23-51).

As to claim 5, Hobbs discloses a server (211 fig.4), for receiving an execution request from a client (203 fig.4) and for performing a predetermined function in consonance with said execution request, comprising:

a command analyzer (proxy server 207 fig.4) for, in response to the selection of a function execution request object that is included in a web page displayed by said client (203 fig.4) and that is used to request that said server execute a process, accepting and analyzing an execution request that is received by said server and that includes information concerning a storage location (230 fig.4) for a target web page that is to be processed (providing web requests to clients, see col.13 line 66 to col.14 line 24).

a web page acquisition unit (document server 202 fig.4) for obtaining said target web page based on said information that is included in said execution request concerning said storage location (230 fig.4) for said target web page (see col.14 line 25 to col.15 line 28).

a web page converter (using a gateway is any application program that receives data from a browser or other HTTP server converts it into a form the database can understand) for performing a predetermined conversion process for said target web page that is obtained (see fig.5, col.13 lines 41-65 and col.15 lines 29-57).

As to claim 6, Hobbs discloses a transmission unit for returning, to said client, the

Art Unit: 2151

resultant web page obtained by the performance of said conversion process (preparing and providing HTML documents for publication on the World Wide Web, see fig.5, col.15 line 29 to col.16 line 34).

As to claim 7, Hobbs discloses that said obtained web page is linked with another web page, said web page acquisition unit also obtains a web page at a linking destination and wherein said web page converter performs said predetermined conversion process (converting into appropriate forms) for said web page at said linking destination that is obtained by said web page acquisition unit (see fig.5, col.15 line 29 to col.16 line 59 and col.24 lines 13-51).

As to claim 11, Hobbs discloses a web server (document server 202 fig.4), for storing a web page that is browsed by means of a communication network, comprises:

storage means (230 fig.4) for storing a web page, including both a description of a URL for a function providing server (202 fig.4), which performs a predetermined process for a web page, and a description of an option for obtaining a URL for a web page that is inserted into said web server (202 fig.4) (providing web requests to clients, see col.13 line 66 to col.14 line 24).

and communication control means (211 fig.4) for accepting a request to browse a web page and for returning said web page to the source that transmitted said request (sending back to clients' browsers the web documents, see fig.5, col.15 lines 29-63 and col.16 line 34 to col.17 line 32).

As to claim 12, Hobbs discloses a web page (fig.7) comprising:

a first script (frame 400 fig.7 containing HTML codes which call for documents), for displaying an execution function request object on a web page (see fig.7, col.17 line 49 to col.18 line 31).

and a second script (, performed in response to the selection of said function execution request object on said web page, which is displayed by predetermined display means (frames display), for obtaining the URL of said web page and for transmitting the URL (transmitting HTML documents or hyperlinks to clients according to their requests) to a function providing server (proxy server) that has been registered in advance (see col.18 line 32 to col.19 line 39).

As to claim 13, Hobbs discloses a data processing method for receiving an execution request from a client and for performing a predetermined process in consonance with the execution request comprising the steps of:

analyzing, in response to the selection of a function execution request object that is included in a web page displayed by said client and that is used to request that said server execute a process, an execution request that is received by said server and that includes information concerning a storage location for a target web page that is to be processed (providing web requests to clients, see col.13 line 66 to col.14 line 24).

obtaining said target web page based on the information, which is included in said execution request, concerning said storage location for said target web page (see

Art Unit: 2151

col.14 line 25 to col.15 line 28) and performing a predetermined conversion process for said target web page that is obtained (using a gateway is any application program that receives data from a browser or other HTTP server converts it into a form the database can understand) (see fig.5, col.13 lines 41-65 and col.15 lines 29-57).

As to claim 14, Hobbs discloses storage medium on which input means of a computer stores a computer-readable program, which permits said computer to perform:

analyzing, in response to the selection of a function execution request object that is included in a web page displayed by said client and that is used to request that said server execute a process, an execution request that is received by said server and that includes information concerning a storage location for a target web page that is to be processed (providing web requests to clients, see col.13 line 66 to col.14 line 24).

obtaining said target web page based on the information, which is included in said execution request, concerning said storage location for said target web page (see col.14 line 25 to col.15 line 28) and performing a predetermined conversion process for said target web page that is obtained (using a gateway is any application program that receives data from a browser or other HTTP server converts it into a form the database can understand) (see fig.5, col.13 lines 41-65 and col.15 lines 29-57).

As to claim 15, Hobbs discloses a storage medium on which input means of a computer stores a script written in a source of a web page, said script includes:

a first script (frame 400 fig.7 containing HTML codes which call for documents), for displaying an execution function request object on a web page (see fig.7, col.17 line 49 to col.18 line 31).

and a second script, performing in response to the selection of said function execution request object on said web page, which is displayed by predetermined display means (frames display), for obtaining the URL of said web page and for transmitting the URL (transmitting HTML documents or hyperlinks to clients according to their requests) to a function providing server (proxy server) that has been registered in advance (see col.18 line 32 to col.19 line 39).

As to claim 16, Hobbs discloses a program transmission apparatus comprising:

storage means for storing a first script (frame 400 fig.7 containing HTML codes which call for documents), for displaying an execution function request object on a web page (see fig.7, col.17 line 49 to col.18 line 31).

and a second script, performed in response to the selection of said function execution request object on said web page, which is displayed by predetermined display means (frames display), for obtaining the URL of said web page and for transmitting the URL (transmitting HTML documents or hyperlinks to clients according to their requests) to a function providing server (proxy server) that has been registered in advance and transmission means for reading said first and said second scripts from said storage means and for transmitting said first and said second scripts (see col.18

line 32 to col.19 line 39 and col.20 lines 9-67).

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 4 and 8-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hobbs in view of Gabbard et al.(hereafter Gabbard), U.S. Pat. No.6,205,432.

As to claim 4, Hobbs' teachings still applied as in item 3 above. Hobbs further suggests servers to insert a various types of content such as words, video data, images, sentences into a web document (see Hobbs' fig.5, col.15 lines 29-63). Hobbs does not specifically disclose inserting predetermined advertisement contents. However, Gabbard in the same web services environment discloses inserting predetermined advertisement contents (advertisement is inserted into the message and stored at server, see fig.5, col.10 line 27 to col.11 line16). It would have been obvious to one of the ordinary skill in the art at the time the invention was made to incorporate Gabbard's feature into the computer system of Hobbs to process users' requests because it would have allowed users to insert into an end user communication message into the background reference after receiving the original message sent from an end user and

Art Unit: 2151

before sending the message to be delivered to an end user (see Gabbard's col.4 lines 12-36).

As to claim 8, Hobbs discloses conversion process for said target web page that is obtained (using a gateway is any application program that receives data from a browser or other HTTP server converts it into a form the database can understand) (see fig.5, col.13 lines 41-65 and col.15 lines 29-57). Hobbs further suggests servers to insert a various types of content such as words, video data, images, sentences into a web document (see Hobbs' fig.5, col.15 lines 29-63). Hobbs does not specifically disclose inserting predetermined advertisement contents. However, Gabbard in the same web services environment discloses inserting predetermined advertisement contents (advertisement is inserted into the message and stored at server, see fig.5, col.10 line 27 to col.11 line16). It would have been obvious to one of the ordinary skill in the art at the time the invention was made to incorporate Gabbard's feature into the computer system of Hobbs to process users' requests because it would have allowed users to insert into an end user communication message into the background reference after receiving the original message sent from an end user and before sending the message to be delivered to an end user (see Gabbard's col.4 lines 12-36).

As to claim 9, Hobbs discloses that the content type based on the type of processing that said web page converter performs for said web page conversion process (using a gateway is any application program that receives data from a browser or other HTTP

Art Unit: 2151

server converts it into a form the database can understand) (see fig.5, col.13 lines 41-65 and col.15 lines 29-57). Hobbs further suggests servers to insert a various types of content such as words, video data, images, sentences into a web document (see Hobbs' fig.5, col.15 lines 29-63). Hobbs does not specifically disclose inserting predetermined advertisement contents. However, Gabbard in the same web services environment discloses inserting predetermined advertisement contents (advertisement is inserted into the message and stored at server, see fig.5, col.10 line 27 to col.11 line16). It would have been obvious to one of the ordinary skill in the art at the time the invention was made to incorporate Gabbard's feature into the computer system of Hobbs to process users' requests because it would have allowed users to insert into an end user communication message into the background reference after receiving the original message sent from an end user and before sending the message to be delivered to an end user (see Gabbard's col.4 lines 12-36).

As to claim 10, Hobbs discloses that the content type based on a keyword that is extracted from said web page (using keywords to help people to search tips, see col2 lines 25-51 and col.15 lines 29-57). Hobbs further suggests servers to insert a various types of content such as words, video data, images and sentences into a web document (see Hobbs' fig.5, col.15 lines 29-63). Hobbs does not specifically disclose inserting predetermined advertisement contents. However, Gabbard in the same web services environment discloses inserting predetermined advertisement contents (advertisement is inserted into the message and stored at server, see fig.5, col.10 line 27 to col.11

line16). It would have been obvious to one of the ordinary skill in the art at the time the invention was made to incorporate Gabbard's feature into the computer system of Hobbs to process users' requests because it would have allowed users to insert into an end user communication message into the background reference after receiving the original message sent from an end user and before sending the message to be delivered to an end user (see Gabbard's col.4 lines 12-36).

***Other prior art cited***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
  - a. Poole, US pat. No.6,006,242: Method for constructing electronic forms in a communications network.
  - b. Gilmour, US pat. No.6,205,472: Querying a user knowledge profile.
  - c. Krishnan, US pat. No.6,366,956: Monitoring access information in the Internet.
  - d. Jamtgaard et al., US pat. No.6,430,624: Controlling content delivery different types in the computer network.

***Conclusion***

7. Claims 1-16 are rejected.
8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Khanh Dinh whose telephone number is (703) 308-

8528. The examiner can normally be reached on Monday through Friday from 8:00 A.m. to 5:00 P.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Zarni Maung, can be reached on (703) 308-6687. The fax phone number for this group is (703) 872-9306.

*A shortened statutory period for reply is set to expire THREE months from the mailing date of this communication. Failure to response within the period for response will cause the application to become abandoned (35 U. S. C . Sect. 133). Extensions of time may be obtained under the provisions of 37 CFR 1.136(A).*

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 305 -9600.
